

THIS IS...  
OHB HELLAS

We.Create.Space.

# WHO WE ARE

OHB Hellas is the first dedicated Space Systems company in Greece with the ambition to develop space business with the collaboration of the already established local space companies.

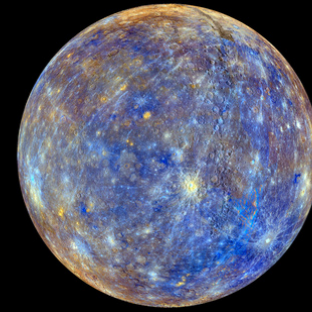

The first target is to provide support to public & private institutions, associations and agencies, such as the Hellenic Space Center with the expertise and strategic advice from a system integrator perspective.

The light company structure and the entrepreneurial mindset allows OHB Hellas to operate as a pilot entity for the OHB group in high and advanced technologies in the space industry. The company is focusing its effort to support mainly the group and build technological competencies in Greece in the area of Additive Manufacturing, Smart Manufacturing and Software-Defined Satellite.

# — DEDICATED SPACE SYSTEMS COMPANY IN GREECE

Trust, Encouragement, Responsibility,  
Collaboration, Versatility, Effective  
Communication, Visionary People, Spread of  
Aerospace Science, Respect, Development  
are only a few of our values!

## Vision

The establishment of a subsidiary in Athens marks the first step of the group's vision to support the development of the space industry in Greece. The first target is to provide support to public & private institutions, associations and agencies and, such as the Hellenic Space Center with the expertise and strategic advice from a system integrator perspective.

## Corporate Social Responsibility

Corporate Social Responsibility has gained terrain in our company as it is reflecting our philosophy and our point of view. OHB Hellas proudly stands by the side of employees, the community and the young people. As a company, we focus on three main pillars: human, innovation and development.

We.Create.Space.

# FIELD OF WORK

## **On-Board Data Processing**

From its existing heritage in the domain, the company is exploring the possibility to transfer part of the processing of satellite data from the earth (ground segment) to space (space segment), through the development of so-called On-board Payload Data Processing (OPDP).

## **Requirements Management**

Requirements Management is essential for the successful completion of projects as requirements are the single thread that goes through a project from conception through build, test and flight.

## **Documentation Management & Control**

Documentation Management & Control is dedicated to the coordination and monitoring of documents' flow (storage, retrieval, distribution) in a controlled and efficient way, which ensures accessibility to authorized personnel whenever required.

## **Additive Manufacturing**

OHB Hellas intends to focus on the development of polymer-based Additive Manufacturing (AM) for aerospace applications. This idea is based on the ongoing progress that is made in the area of AM processes and materials.

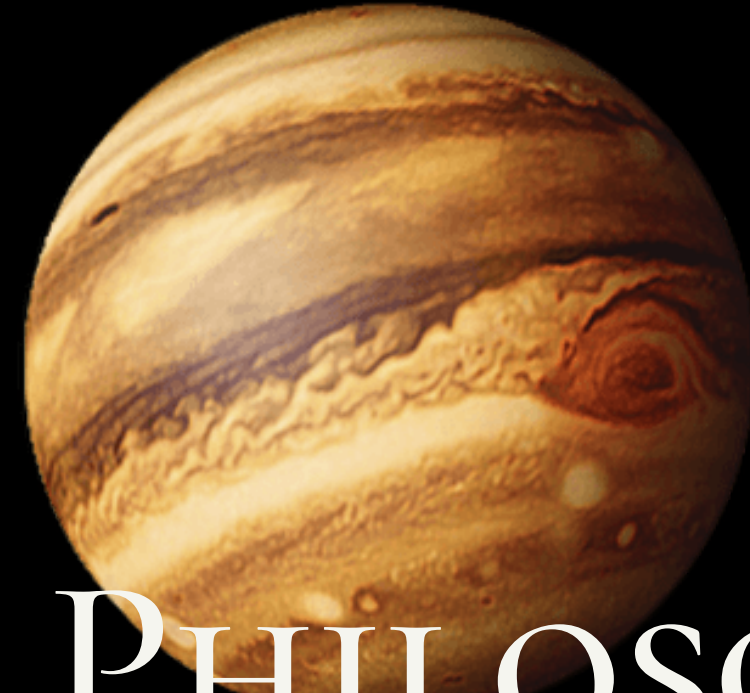

# WE STAND BY THE SIDE OF YOUNG PEOPLE!

---

•  
•  
•  
●  
•

OHB Hellas generates an opportunity for the young motivated engineers to have a career in the space industry in Greece and to be, in parallel, part of one of the largest corporations in Europe's space sector. It intends to contribute to the return to the country of highly educated Greek scientists and engineers, who are currently working abroad. We insist on human capital, as we highly believe that an employee is an investment and not a cost, is the most valuable aspect for a company and a source of competitive advantage against the others.

# OUR PHILOSOPHY

“Our work is not science fiction. A career in space exploration is not a dream but a growth industry for fast and imaginative thinkers.”

Marco R. Fuchs, CEO, OHB SE
